

High-tech in its most elegant form

With its new DesignCams Dallmeier is again setting standards in the video security industry.

Integration into the overall design concept

Customers increasingly demand more than just a technically flawless product; they also view cameras from an aesthetic point of view. Many of them consider it important that the cameras seamlessly integrate themselves into the overall design concept. Many building owners spend large sums of money erecting an architecturally stunning building. Naturally, security products need to comply. They should blend in with the environment, not stand out like an afterthought.

Individual designs according to the customers' needs

That is why Dallmeier offers all its camera models as 'Designer Versions' as well. Customisation is no problem of course, and requirements range from the stuccoed ceiling of a museum to the burl wood interior of a casino. The cameras are available in a compact design and can be ideally integrated into the building's design due to different housing colours, without standing out.

Pleasant atmosphere

The 'Design Cams' also have the advantage of not giving guests and visitors a feeling of constant surveillance. Therefore, the atmosphere is much more pleasant because nobody feels as if they are being watched all the time.

Choose from our range of Cam_inPIX® DesignCams - highest performance combines with unique design that blends in with your environment. High technology in its most elegant form!
